

MISSION LOG · A PITCH

Pale Blue Pebble

A tiny planet, a cat in a green spacesuit, and one rule: every living thing you plant makes the world bigger.

For iPhone and iPad. Single player. Entirely offline. In development at Barnisan.

The title screen. Day one.

DEV MODE

Bottomless pack. Unlocks are still earned.

Release-ce4a922-dirty

You set down on a rock barely wider than your shadow.

In the hold: seeds and dirty ice. Walk it, plant it, thaw it, and see if it will hold an atmosphere before your air runs thin.

Plant a seed and a shoot appears. Twenty seconds later it is a tree, and the world is measurably bigger than it was. Dig a bowl, melt a block of ice into it, and there is a pool. Trees drink from it and drop seed pods. Meltwater leaves frost on the night-side peaks. The loop closes: the Pebble starts supplying its own materials.

It says what it wants, in one word under the panel. Thirsty. Roots. Thriving.

Minute one. A rock you can walk round in under a minute.

PL

Four verbs, one big button whose label keeps changing.

Left thumb walks, right thumb looks. Everything else is a labelled button in the bottom corner, and the label is the instruction. Hold a finger on anything for half a second and a card tells you what it is and how it is doing.

No menus during play. No text entry. Nothing to read that the game does not say out loud first.

PLANT

Which tree you get is decided by the season and the height of the ground. You never choose. You find out.

MELT

Dig a bowl, pour a block in. Bowl by bowl you can build a lake, or a river. It refuses if it would drown a tree.

ZAP

Borers chew the roots and crack into ice when zapped. Critters eat the pods and leave a pelt.

BUILD

Take a blueprint at the lander, carry it to where it stands. Twenty-seven buildings, each with a job.

The horizon gets farther away. Your boots stay the same size.

Growth is literal. The planet gets bigger under your feet as you tend it, the lander becomes a speck on the far ridge, and the camera can pull all the way back to orbit until the whole world hangs in frame.

Each new size stops everything for a card with one line on it. Then the gauges fall, because a bigger body asks for more. The ladder never stops.

SMALL WORLD → YOUNG PLANET → HOME → WIDE WORLD → BLUE PEBBLE → WORLD → ...

The same rock, some hours of tending later, from orbit.

Built the Arcade way from the first day, not adapted to it.

- **No ads, no purchases, no accounts.** Nothing collected. That is how Barnisan builds every game, so there is nothing to strip out.
- **Entirely offline.** It works on a plane and it works in a tunnel.
- **Landscape on iPhone and iPad** with a two-thumb scheme and four big buttons, which maps cleanly to a controller. Mac and Apple TV are within reach.
- **For anyone.** Nothing dies on screen. A cat, a goose, a rainbow. Families can hand it across the table.
- **Sessions of ten minutes or an evening.** It saves where you left it and asks nothing when you come back.

Blue Pebble. The auroras tell you which way is north.

Playable on device today. In active development. We would like to send you a build.

Four of five chapters are in and playable end to end. No release date is set, and we would rather talk before we set one. What we are asking for is a conversation about Pale Blue Pebble on Apple Arcade.
